

International bilateral cooperation between Italy and Canada in scientific research and technology innovation is one of the priorities of Italy's foreign policy, in order to ensure, through Italian know-how, the country's competitive abilities and the development of advanced production industries.

The goal of this meeting of experts is to highlight Canada's excellent capabilities in nutrition, as well as Italian areas of excellence in nutrition, food packaging, genomics, traceability, and the history of nutrition. Another aim is to increase awareness of the Canadian and Italian scientific communities, with a view to promoting innovation development at the international level and further enhancing bilateral cooperation between Italian and Canadian research centres and universities in a European context.

La coopération bilatérale internationale entre l'Italie et le Canada dans la recherche scientifique et l'innovation technologique est une des priorités de la politique étrangère italienne, afin de garantir, par le "know-how" italien, la compétitivité et le développement des industries italiennes.

L'objectif de cette rencontre d'experts est de mettre en lumière les excellentes capacités du Canada dans le secteur de la nutrition ainsi que les excellences italiennes dans les domaines de la nutrition, de l'emballage alimentaire, de la génomique, la traçabilité et l'histoire de la nutrition. Autre but est d'augmenter la connaissance des communautés scientifiques canadienne et italienne, encourager le développement de l'innovation au niveau international et accroître ultérieurement la coopération bilatérale entre les centres de recherche et les universités italiens et canadiens dans un contexte Européen.
