# Thursday seminars

*Taking a Look at the Future:  
a cocktail hour event!*

Dr. Luca Maggiani  
(Sma-RTy)

## AI and communications at the edge

We travel, work and converse, constantly connected to increasingly efficient and widespread communication networks. We are now used to the periodic evolutions of the communication equipment, which guarantee bandwidth increases and latency reduction, to make information available more and more easily. However, recent developments in 5G and 6G technologies are opening up new scenarios, where communication infrastructures are increasingly migrating towards virtualization and servitization. What if the keystone of future applications was precisely in the evolution of the network itself?
