KEY-NOTE LECTURE |
PULSE NETWORK
Organized within the 3rd PULSE
Co-design & Co-creation Event
"Formulating & Processing
the Port-Cluster Landscape:
Strategies Brainstorming".

Created over 30 years ago by port and city stakeholders looking to promote dialogue on the transformation of city-port interfaces, AIVP - The Worldwide Network of Port Cities has established a reputation as the world's leading organisation supporting sustainable city-port development strategies.

Port cities are at the front line of sustainable development challenges. Coastal regions will suffer some of the worst consequences of climate change. However, port cities are also the best scenarios to test innovative solutions tackling different issues: from energy transition and innovative industries, to mobility, or cultural development.

The AIVP Agenda 2030 includes 10 goals indicating the main

challenges for sustainable port cities, and 46 measures for action. Each one of AIVP's 10 goals connect to several SDGs, responding to the holistic approach we need for sustainable development. Its aim is to inspire port and city actors to act following the AIVP Agenda 2030, maximizing the investment and resources.
