

Invitation: HFSP Symposium in Rome - 21 April 2026

Dear colleagues,

It has been quite a while since HFSP was last active in Italy, but this will change in April.

I would like to use this opportunity to invite you to attend the HFSP Scientific Symposium (Frontier Science in Italy), which will take place on 21st April in Sala Marconi at the Consiglio Nazionale delle Ricerche (CNR) in Rome.

Why this symposium? HFSP has a history of engaging with the leadership of our organization and with the scientific communities in the member countries. With the help of the Italian representatives on the Board of Trustees and the Council of Scientists, we want to increase the visibility of HFSP by bringing the scientific community together and highlighting examples of the outstanding results achieved under HFSP support.

This year will be very important for us because in July, the HFSP members will sign the next three-year agreement on the budgetary framework and program activity plan for the triennium 2027-2029. Providing decision-makers with an opportunity to engage with the Italian HFSP community is therefore an important way to show the value added of our program.

Please use the following button to register for the symposium, which is free of charge.

It would be great to touch base again after several years and I look forward to this reunion.

Kind regards,

Guntram Bauer
HFSP Chief Scientific Officer
