### Research-related skills

Alberto Figoli is expert in the field of membrane technology, particularly in *membrane preparation and characterisation and application in environmental filed*. He is working on the preparation and characterisation of novel elastomeric and glassy membranes, both in flat and hollowfiber configuration, which are applied to the removal of VOC from water by pervaporation or water treatment by membrane contactors. Furthermore, he is also involved on polymeric capsules preparation by membrane process which aim to tailor their morphology to the release of the species of interest for food packaging, chemical and environmental applications. He is also working on pervaporation applied to the removal of contaminants (i.e. VOC) from water and aroma recovery from natural matric (fruit or vegetables).
