Staff

### Location

Country	Province	City	Work Location
---------	----------	------	---------------

Italy Emilia-Romagna Parma

## Motivation

Coming from a purely scientific upbringing and educational background (both my parents are medical doctors), I've always been passionate about human behaviors in relation to health and society. Naturally driven towards eating behaviours and food sciences (probably under major culinary influence of my father family side, originating from medditeranean middle east countries), my educational choices were made accordingly, so I specialized in Nutrition, human physiology and food sciences. Along those major disciplines, I followed complementary courses in epidemiology, risk assessment, health-nutrition communication, as well as environmental health.

I benefit from several public-health-oriented internships, from NGOs specialized in food education (Croquarium, in Canada), medical research (INSERM) around eating behavioral development, to National Food Safety Agency (Anses), working in the communication department, hand in hand with scientific teams, which is a work/intellectual environment I'm certainly very comfortable with.

For 6 years now I've been working in ProtéinesXTC agency, a strategy/innovation agency which stands out through its singular approach of food, health and environmental challenges : reaching out to scientific expertise in order to tackle major society issues, for key actors in the agro/food/crop protection/chemistry sectors : health, environment, nutrition, sustainability, etc.

As a project manager, then as consulting engineer, my job is to design and analyse studies and reports around those sectors, organize and animate expert groups and work taskforces, as well as perform nutritional/quality audits of food products, dealing with extensive nutritional and ingredient databases.

Getting back closer to my original public health appetences, I hope I can contribute to a safer Europe through its Food Safety Agency, and promote healthier food choices as a result, while reinforcing scientific expertise of this great Agency.

## Experience and Credentials

### Education

#### Education 1

##### Institution
