

DILETTA BERGAMO

About me

Graduated with honour in Pharmacy at the University of Padova in 2020 I carried out my graduation thesis in Prof. Mattarei's research group focusing on antitumoral compounds synthesis that provided me with essential knowledge for the design and synthesis of new molecules.

I performed my PhD at the University of Parma under the supervision of Prof. Marco Pieroni, on the design and synthesis of antimicrobial peptidomimetic compounds. Throughout these years I had the great opportunities to join two international research groups: Brimble's lab at the University of Auckland and Müller's lab at the Helmholtz institute.
