Research fellowship

ISSMC-CNR (via Granarolo 64, 48018 Faenza RA, Italy)

Research in the field of transparent ceramics (TC), based on garnets (YAG and GAGG), for laser and scintillation application.

Experimental skills: powder treatment (weighing, mixing, desiccation, pressing), thermal treatment (calcination and high-vacuum sintering), polishing, characterization (SEM, EDX, transmittance and optical microscope for porosity analysis), tape casting of ceramic powder.

Nov 2019 - Oct 2022

PhD student

ISSMC-CNR (former ISTEC) (via Granarolo 64, 48018 Faenza RA, Italy)

Research in the field of transparent ceramics (TC), based on YAG (yttrium aluminium garnet), for laser application. The PhD research work was part of the project CeMiLAP² funded by the Italian Ministry of Defence. The aim of the project is to produce transparent YAG with non-uniform doping of Ytterbium and Chromium to increase laser efficiency. The approach verted on the selection of suitable starting materials, the test of different powder treatments and sintering conditions.

Experimental skills: powder treatment (weighing, mixing, desiccation, pressing), thermal treatment (calcination and high-vacuum sintering), polishing, characterization (SEM, EDX, transmittance and optical microscope for porosity analysis), tape casting of ceramic powder.
